CONFIDENTIAL

- d. At the Blansko factory the largest size of castings for turbines, machinery for alchohol distilleries and sugar refineries, etc. is being produced.
- e. It is reported that production is beginning at Zbrojovka Brno on a new heavy air-cooled machine gun, having a much greater muzzle velocity than any previous machine gun. The prototype of this gun was tested this year.
- Two employees of CKD (the head of the standardization section who is a member of the People's Party, and a member of the "provozni" committee who is a Communist) have confirmed the fact that preparations are being made for decentralization of the existing great national corporations, such as CMD, Skoda, and Zbrojovka. Ultimately, each factory will be an independent undertaking with its own production management. This plan originated with the KSC. Work on such decentralization is already proceeding at a feverish pace. From the technical angle, the person in charge of these preparations is the director of the firm involved; from the personnel roint of view, this individual is the "cadre trusty" (kadrovy duvernik). The latter is appointed by the KSC and must not have any family bourgeois taint.
- 5. The purpose of this decentralization is to obtain easier control of the working class, since it has been observed that large groups of workers express their discontent and aggressiveness nore often than do smaller groups. By decentralization the Communists promise greater productivity, although some experts believe that decentralization will result in harmful effects such as extension of clerical personnel, increased attendance at meetings, and uncontrolled purchasing facilities. Decentralization contradicts, of course, the Communist theory of creating huge combines with centralization of production, of purchases and sales, and of planning. It is obvious that this economics concept is to be subordinated to politics in an effort to counteract any tendency of the working class to be rebellicus and aggressive.
